TEXT:

TriStrata is shipping Version 2.0 of its Secure Information Management System, which provides users with the means to protect data both in storage and in transit and includes new features for protecting external communications.

The TriStrata system is intended to allow IT managers to provide authentication, authorization, data integrity, confidentiality, recovery, electronic signatures, and auditing of information on a network by wrapping information in an "electronic envelope" to protect data.

"It's an architectural solution," said Paul Wahl, president and CEO of TriStrata, and an SAP alumnus. "It's a solution that goes beyond the enterprise."

The TriStrata Secure Information Management System 2.0 is made up of the TriStrata Extended Enterprise Security Server (TESS), the TriStrata Client Module, and the TriStrata Entity Module. Once information has been encrypted in an envelope, it can be opened only by a recipient when the message connects to a TESS server and is authenticated by the system.

New features in the TriStrata Secure Information Management System 2.0 are intended to protect data in an extended enterprise; they include:

- \* integration with Microsoft Windows Explorer;
- \* integration with Microsoft Exchange, Outlook, and Outlook 98, as well as Lotus Notes 4.1 to 4.6;
- \* WinSock 1.2 virtual private network (VPN) capability; and
- \* the capability to access and protect data when offline.

The TriStrata system also supports a number of encryption algorithms, including DES and Triple-DES, and complies with U.S. government key data recovery policies enabling exporting of strong encryption messages.

Although the TriStrata system does not currently utilize the public key infrastructure for digital certificates, it can still be a useful system for some businesses, according to analysts.

"It has a lot of promise, especially for small and midsize companies and for distributed operations of large companies," said Chris Christiansen, program director of Internet security at International Data Corp., in Framingham, Mass. "[These types of companies] are looking for an integrated solution, [in essence] a basic plug-and-play security product that includes encryption, VPN, and administration."

The TriStrata Secure Information Management System 2.0 is shipping now for Windows NT. Prices start at \$350 per user for 5,000 users or more.

TriStrata Inc., in Redwood Shores, Calif., can be reached at [www.tristrata.com](http://www.tristrata.com).

Solution Offers Manageability and Performance for End-to-End Application Security

REDWOOD SHORES, Calif., March 22 /PRNewswire/ -- TriStrata Inc. today announced the TriStrata Secure Information Management System 2.0(TM). Now, Fortune 1000 companies can securely extend their enterprises to the Internet, with confidence that they have control over their information assets. The TriStrata System offers a strong combination of information manageability, system performance, scalability, and complete desktop-to-application security, allowing companies to fully capitalize on the Internet to create operating efficiencies, develop closer relationships, and maximize e-business initiatives.

Unlike point products, the TriStrata System addresses the need for comprehensive management, protecting corporate information whether in transit or storage. The TriStrata System provides control over information based on dynamic rules designed to fit operational and information security policies specific to each company. Because the system is network-centric, all information access is automatically tracked to determine who is doing what, when, and where. The TriStrata System provides complete desktop integration within a Microsoft Windows-based environment. In addition, information is protected transparently, so users can focus on work, not an additional security task.

"In the past, companies had an enterprise-centric model for gathering and exchanging information assets internally," said Paul Wahl, who left his post as CEO of SAP America in September to join TriStrata as President and CEO. "Today companies are making information available via the Internet but are faced with the challenge of exchanging sensitive information in a controlled way. The TriStrata Secure Information Management System 2.0 is designed to enable this transition from an enterprise-centric IT model to an Internet-centric business model, allowing companies to take advantage of the opportunities on the Internet and compete in today's dynamic marketplace."

The TriStrata Secure Information Management System 2.0 readily solves the security needs of mobile employees by providing them with the ability to protect files on their laptop computers. In addition, extensions to popular email packages, such as Microsoft Exchange, Microsoft Outlook, and Lotus Notes, provide users with a secure method of sending email.

The TriStrata System also provides organizations with comprehensive information management and control by allowing protected information to be made available individually or through groups based on an employee's association or role within the company. Users can also create affiliations

that span multiple organizations within an extended enterprise. When needed, organizations can revoke a user's authorization immediately.

"The drive towards e-business and the reality of virtual enterprises is transforming information systems in large companies very quickly -- faster than infrastructure has evolved," said Steve Foote, vice president of research strategy and director of the Systems and Applications Management service for Hurwitz Group, Inc. "What is needed is a new method of secure information management that provides an end-to-end solution to track operations in real-time, providing dynamic control of information as it is distributed throughout the extended enterprise."

The TriStrata Secure Information Management System 2.0 Made up of three components -- TriStrata Extended Enterprise Security Server(TM) (TESS(TM)), TriStrata Client Module (TCM) and TriStrata Entity Module (TEM) -- the TriStrata Secure Information Management System provides a protective layer for an enterprise's existing technology infrastructure, assuring a trusted environment to conduct business on the Internet. The TriStrata System allows users to perform the full range of security applications including authentication, authorization, data integrity, confidentiality, recovery, electronic signature, and auditing within one system and readily integrates with existing IT infrastructures, applications, and devices.

The TriStrata System is based on an open cryptographic architecture, providing customers with a choice of algorithms to protect information, including Blowfish, CAST5, DES, RC4, Triple DES, and TriStrata's own Random KeyStream(TM) (RKS). TriStrata's technology incorporates a self-escrowed key- management infrastructure approved for global export by the U.S. Department of Commerce.

"TriStrata offers a breakthrough in secure information management for organizations and their extended enterprises -- customers, partners, suppliers, and others," said Dorothy E. Denning, Georgetown University Professor. "Its centralized approach allows organizations to automatically track and audit information flow globally, ensuring that the right people are looking at the right information at the right time."

New features available in the TriStrata Secure Information Management System 2.0:

- Microsoft Windows Explorer integration to selectively protect any document or file.
- Extensions to Microsoft Exchange, Microsoft Outlook '97, Microsoft Outlook '98, and Lotus Notes 4.1- 4.6 for secure email.
- TSdisk(TM) secure PC volume to allow protection of files either online or off-line or to share volumes.
- Winsock 1.1 compliant virtual private network (VPN) for protection of corporate intranets and extranets as well as communication from remote users.
- Dynamic, delegatable policy model to allow information to be made available individually or through associations that can span multiple organizations.
- Support for open cryptographic algorithms to protect data, including Blowfish, CAST5, DES, RC4, Triple DES, and RKS.
- Scalability to support up to one million enrolled users and sixteen thousand organizations. Each TESS supports up to 2,000 transactions per second with replication across 8 TESS pairs for additional capacity and availability.

#### Pricing and Availability

The TriStrata Secure Information Management System 2.0 is available directly from TriStrata in cooperation with partners including PricewaterhouseCoopers and Inacom. It is priced by the seat at \$350 per enrolled user for deployment of 5,000 or more users.

#### TriStrata Inc.

Located in Redwood Shores, California, TriStrata Inc. was founded by Dr. John Atalla, the father of the PIN and inventor of the Atalla Box, which currently secures 80 percent of all ATM (automatic teller machine) transactions. TriStrata provides extended enterprises with a high performance, scalable, end-to-end solution to secure and manage information assets. TriStrata's system provides a protective layer for existing computing and network infrastructures assuring a trusted environment to conduct business anywhere on the Internet, thereby enabling new business opportunities, revenue streams, and operating efficiencies. The company's board of directors includes Dr. John Atalla, TriStrata chairman; Paul Wahl,

TriStrata president and CEO; David Beirne, general partner, Benchmark Capital; Judith O'Brien, partner of Wilson Sonsini Goodrich and Rosati; Thomas Perkins, founder, Kleiner Perkins Caufield and Byers; John Young, retired president and CEO of Hewlett-Packard; and William Zuentd, former president and COO of Wells Fargo and Company.

TriStrata is a registered trademark of TriStrata Inc. Random KeyStream, TSdisk, TriStrata Extended Enterprise Security Server, and TESS are trademarks of TriStrata Inc. Contains encryption software from RSA Data Security, Inc. Other product and company names may be the trademarks of their respective owners.

M2 PRESSWIRE-4 May 1999-TRISTRATA: TriStrata delivers Secure Information Management System 2.0 (C)1994-99 M2 COMMUNICATIONS LTD3

RDATE:290499

\* Solution Offers Manageability and Performance for End-to-End Application Security

TriStrata Inc. has announced TriStrata Secure Information Management System 2.0. Now Times 1000 companies can securely extend their enterprises to the Internet, with confidence that they have control over their information assets. The TriStrata System offers a strong combination of information manageability, system performance, scalability, and complete desktop-to-application security, allowing companies to fully capitalise on the Internet to create operating efficiencies, develop closer relationships, and maximise e-business initiatives.

Unlike point products, the TriStrata System addresses the need for comprehensive management, protecting corporate information whether in transit or storage. It provides control over information based on dynamic rules designed to fit operational and information security policies specific to each company. Because the system is network-centric, all information access is automatically tracked to determine who is doing what, when, and where. The TriStrata System provides complete desktop integration within a Microsoft Windows-based environment. In addition, information is protected transparently, so users can focus on work, not an additional security task.

"In the past, companies had an enterprise-centric model for gathering and exchanging information assets internally," said Paul Wahl, who left his post as CEO of SAP America in September to join TriStrata as President and CEO. "Today companies are making information available via the Internet but are faced with the challenge of exchanging sensitive information in a controlled way. The TriStrata Secure Information Management System 2.0 is designed to enable this transition from an enterprise-centric IT model to an Internet-centric business model, allowing companies to take advantage of the opportunities on the Internet and compete in today's dynamic marketplace."

The TriStrata Secure Information Management System 2.0 readily solves the security needs of mobile employees by providing them with the ability to protect files on their laptop computers. In addition, extensions to

popular email packages, such as Microsoft Exchange, Microsoft Outlook, and Lotus Notes, provide users with a secure method of sending email.

The TriStrata System also provides organisations with comprehensive information management and control by allowing protected information to be made available individually or through groups based on an employee's association or role within the company. Users can also create affiliations that span multiple organisations within an extended enterprise. When needed, organisations can revoke a user's authorisation immediately.

"The drive towards e-business and the reality of virtual enterprises is transforming information systems in large companies very quickly - faster than infrastructure has evolved," said Steve Foote, vice president of research strategy and director of the Systems and Applications Management service for Hurwitz Group, Inc. "What is needed is a new method of secure information management that provides an end-to-end solution to track operations in real-time, providing dynamic control of information as it is distributed throughout the extended enterprise."

Users can also create affiliations that span multiple organizations within an extended enterprise. When needed, organizations can revoke a user's authorization immediately.

"The drive towards e-business and the reality of virtual enterprises is transforming information systems in large companies very quickly -- faster than infrastructure has evolved," said Steve Foote, vice president of research strategy and director of the Systems and Applications Management service for Hurwitz Group, Inc. "What is needed is a new method of secure information management that provides an end-to-end solution to track operations in real-time, providing dynamic control of information as it is distributed throughout the extended enterprise."

The TriStrata Secure Information Management System 2.0 Made up of three components -- TriStrata Extended Enterprise Security Server(TM) (TESS(TM)), TriStrata Client Module (TCM) and TriStrata Entity Module (TEM) -- the TriStrata Secure Information Management System provides a protective layer for an enterprise's existing technology infrastructure, assuring a trusted environment to conduct business on the Internet. The TriStrata System allows users to perform the full range of security applications including authentication, authorization, data integrity, confidentiality, recovery, electronic signature, and auditing within one system and readily integrates with existing IT infrastructures, applications, and devices.

The TriStrata System is based on an open cryptographic architecture, providing customers with a choice of algorithms to protect information, including Blowfish, CAST5, DES, RC4, Triple DES, and TriStrata's own Random KeyStream(TM) (RKS). TriStrata's technology incorporates a self-escrowed key-management infrastructure approved for global export by the U.S. Department of Commerce.

"TriStrata offers a breakthrough in secure information management for organizations and their extended enterprises -- customers, partners, suppliers, and others," said Dorothy E. Denning, Georgetown University Professor. "Its centralized approach allows organizations to automatically track and audit information flow globally, ensuring that the right people are looking at the right information at the right time."

New features available in the TriStrata Secure Information Management System 2.0:

- Microsoft Windows Explorer integration to selectively protect any document or file.
- Extensions to Microsoft Exchange, Microsoft Outlook '97, Microsoft Outlook '98, and Lotus Notes 4.1- 4.6 for secure email.
- TSdisk(TM) secure PC volume to allow protection of files either online or off-line or to share volumes.
- Winsock 1.1 compliant virtual private network (VPN) for protection of corporate intranets and extranets as well as communication from remote users.
- Dynamic, delegatable policy model to allow information to be made available individually or through associations that can span multiple organizations.
- Support for open cryptographic algorithms to protect data, including Blowfish, CAST5, DES, RC4, Triple DES, and RKS.
- Scalability to support up to one million enrolled users and sixteen thousand organizations. Each TESS supports up to 2,000 transactions per second with replication across 8 TESS pairs for additional capacity and availability.

#### Pricing and Availability

The TriStrata Secure Information Management System 2.0 is available directly from TriStrata in cooperation with partners including PricewaterhouseCoopers and Inacom. It is priced by the seat at \$350 per enrolled user for deployment of 5,000 or more users.

#### TriStrata Inc.

Located in Redwood Shores, California, TriStrata Inc. was founded by Dr. John Atalla, the father of the PIN and inventor of the Atalla Box, which currently secures 80 percent of all ATM (automatic teller machine)

transactions. TriStrata provides extended enterprises with a high performance, scalable, end-to-end solution to secure and manage information assets. TriStrata's system provides a protective layer for existing computing and network infrastructures assuring a trusted environment to conduct business anywhere on the Internet, thereby enabling new business opportunities, revenue streams, and operating efficiencies. The company's board of directors includes Dr. John Atalla, TriStrata chairman; Paul Wahl, TriStrata president and CEO; David Beirne, general partner, Benchmark Capital; Judith O'Brien, partner of Wilson Sonsini Goodrich and Rosati; Thomas Perkins, founder, Kleiner Perkins Caufield and Byers; John Young, retired president and CEO of Hewlett-Packard; and William Zuendt, former president and COO of Wells Fargo and Company.

TriStrata is a registered trademark of TriStrata Inc. Random KeyStream, TSdisk, TriStrata Extended Enterprise Security Server, and TESS are trademarks of TriStrata Inc. Contains encryption software from RSA Data Security, Inc. Other product and company names may be the trademarks of their respective owners.

GRADE: A

Some of the most handy Windows utilities are Mijenix's PowerDesk Utilities 98 3.03, Aladdin Systems' Aladdin FlashBack 1.1, Play's Gizmos98, and Nico Mak Computing's WinZip 7.0. PowerDesk Utilities overcomes some of the flaws of Windows **Explorer**. The feature-rich PowerDesk file manager has a customizable toolbar with the same look and feel of **Explorer**, but with many new features. It includes a built-in Zip utility, file converter, and a graphics viewer for viewing over 80 different file formats. It can display two folders or drives side by side on-screen, which makes it easier to drag-and-drop files. FlashBack lets users re-create any file in the same form in which it was previously saved. It saves only changes between versions, so it does not consume a lot of disk space. Gizmos98 is a useful set of Windows utilities that are mostly multimedia-oriented. The Performer utility is used for creating full-screen slide shows with background music and sound effects. The Picture **Explorer** is useful for managing multiple image files. Gizmos98 also includes the Shredder, which truly deletes unwanted files, and Vault, which protects sensitive files with 128-bit encryption. WinZip 7.0 integrates well with Windows, letting users zip and unzip files directly from the **Explorer**.

PRODUCT NAMES: Crystal Reports Professional 4.5 (388327); McAfee  
VirusScan Windows 95 (299791)

TITLE: Lab Notes

AUTHOR: Taschek, John Rapoza, Jim

SOURCE: PC Week, v12 n41 p75(2) Oct 16, 1995

ISSN: 0740-1604

RECORD TYPE: Review

REVIEW TYPE: Product Analysis

GRADE: Product Analysis, No Rating

Crystal Services' Crystal Reports Professional 4.5 is one of the most

powerful database reporting tools for desktops available. This version now offers an even stronger graphing engine and new SQL database drivers. A 16-bit and a 32-bit version are combined on the same CD. The 32-bit version offers performance advantages, although it lacks some of the features of the 16-bit version. The 16-bit version supports more SQL databases, and has the more powerful graphing engine. McAfee's VirusScan for Windows 95 helps to **protect** Windows 95 **data** by detecting and removing viruses. The update **integrates** well with the Windows 95 **Explorer**. The main interface is simple and straightforward, and actions being taken by VirusScan can be selected with the mouse. The product easily restores infected files. The background monitoring feature still runs as a DOS TSR instead of a 32-bit virtual device driver (VxD), although the next release will include the VxD.

**Security tools in the Win2K Server Resource Kit -- Before you administer Win2K, install these essential security-related utilities**

Smith, Randy Franklin

Windows 2000 Magazine , December 1, 2000 , n68 p85-91, 6 Page(s)

ISSN: 1527-1552

Company Name: Microsoft

URL: <http://www.microsoft.com>

Product Name: Microsoft Windows 2000 Server Resource Kit

Discusses 10 security-related utilities found in the Microsoft Windows 2000 Server Resource Kit, beginning with the CyberSafe Log Analyst that allows analysis of the scattered Security logs of the systems in one's domain. Reports that **Directory Services Store** helps diagnose and maintain a Win2K public key infrastructure **integrated** with Active **Directory**. Notes that **Encrypting File System** lets users **protect** confidential **files**, even from intruders; and GPresult provides diagnostic information about how Win2K has applied Group Policy to the current user. Adds that System Scanner 1.1 checks for Internet browser vulnerabilities; and the Security Templates snap-in lets users create different templates for each type of system, from workstations to servers. Also covers how to audit IIS Web servers with the Metabase Editor, restrict concurrent logons with Cconnect, and the IE 5.0 Administration Kit. Includes seven screen displays. (jb)

Company Name: Novell

URL: <http://www.novell.com>

Product Name: IntranetWare

Presents a mixed review of the beta version of Moab (\$NA), an IntranetWare upgrade from Novell Inc. of Orem, UT (800). Says it offers superior **directory** -services, memory **protection**, **native** IP supports, and improved multiprocessor support. Adds that it provides server-name-to-IP-address resolution, features an improved memory scheme which adds reliability and fault tolerance, and improved **directory** services. Notes, however, that its multiprocessor kernel will not work with all applications, it lacks remote access server support, and it does not provide for clustering technology. Calls it functional and attractive for Novell loyalists. Includes one screen display and a product summary. (dpm)

**Eclipse Find excels at finding, viewing files -- Offers built-in PKZip compression**

Marshall, Patrick

InfoWorld , December 27, 1993 , v15 n52/1 p80, 1 Page(s)

ISSN: 0199-6649

Company Name: Phoenix Technologies

Product Name: Eclipse Find

Presents a very favorable review of Eclipse Find (\$89), a Windows file utility from Phoenix Technologies Ltd. of Norwood, MA (800). Says it has a more attractive and efficient interface than most **file** managers, it has Outside/In which is one of the slickest file viewer programs in the market, it preforms quick indexed file searches, has built-in PKZip file compression, offers password **file** **protection**, has a Hard Drive Sweep utility, and it **integrates** well with Eclipse Fax to easily fax files; but it doesn't include all of Outside/In's file viewer which are available at a nominal charge, and only searches index files but lets you schedule indexes updates automatically and in the background. Contains one screen display. (cr)

**Apple prepping up new diagnostic tools, support for SNMP**

Mace, Scott

InfoWorld , December 17, 1990 , v12 n51 p1, 8, 2 Pages

ISSN: 0199-6649

Reports that Apple Computer Inc. has recently unveiled its network diagnostic tools for measuring performance, troubleshooting and Appleshare simulation while prioritizing the further development of system-level **folder** privacy. One such tool, which could predict Appleshare network performance to within 10% of actual operation, features a mouse that manipulates network elements and a cursor that provides linking for components. Discusses the many different roles that network management tools play in development. Reports also that the company is developing centralized software update tools as well as **integrated** network security, remote access features and more stringent password **protection** for network and **file** server entry. Discusses also updates on Apple's current product line as well as the company's planned venture to multitasking. (PAM)

The care and feeding of OpenVMS systems disks. (Technology Tutorial)  
Fiorito, Tony  
Digital Systems Report, v18, n4, p18(4)  
Fall, 1996  
ISSN: 1086-9638 LANGUAGE: English RECORD TYPE: Fulltext; Abstract  
WORD COUNT: 1956 LINE COUNT: 00149

ABSTRACT: The system disk is the most important volume on an OpenVMS system. This disk is critical, because it is where the operating system is located. Upon powering up, the system is controlled by the console program. In a bigger VAX or Alpha system, it is controlled by console firmware. OpenVMS contains several utilities for system disk maintenance. The WRITEBOOT program repairs the boot block pointer to VMB or APB, and the SETFILENOMOVE utility protects critical files from disk defragmenters. This is necessary to protect those files that are accessed outside of the Files-11 file system, and should never be moved. Defragmentation is a good maintenance practice, but SETFILENOMOVE should be...
